

Patria

Patria Offering Newsletter

Welcome to read the latest news about Patria's wide offering, top-notch products, services and solutions. The newsletter is structured according to Patria's offering structure:

- News related to the **Through Life Capabilities** services and solutions
- The **Protected Mobility and Defence Systems** news are about the vehicles, vehicle systems, mortars and armament
- The **Battlefield and Critical Systems** news include the latest information of the four sub-branches: Intelligence and surveillance, Underwater systems, Situational awareness and cyber and Unmanned systems.

Patria – Extreme conditions embedded.

See the new video about Patria's wide offering

Patria creates innovative solutions and build intelligent systems that provide extreme survivability in any conditions. The offering is divided into three branches, which are showcased in the new brand animation video. See the new video [here](#).

Webinar recording

The latest topics of Patria's offering are showcased also in the new webinar, which begins with the offering video. After that **Jussi Järvinen**, Executive Vice President of the Finland division will review the status of the CAVS programme. **Hannu Kenttämies**, Lifecycle Management Director will continue representing Through Life Capability and he will present Patria OPTIME – the all-in-one solution for sustained operational readiness especially for the CAVS programme. In the Protected Mobility and Defence Systems branch **Lauri Pauniahho**, Director of the Weapon systems tells more about the brand new Patria TREMOS mortar system, which was launched in the Future Mortar Systems conference end of October. In the Battlefield and Critical Systems branch **Jarkko Tikka**, Director of the Unmanned Systems will present the Unmanned Systems offering. See the webinar [here](#).

THROUGH LIFE CAPABILITY

Patria OPTIME solution – Ultimate fleet availability

Patria OPTIME covers a broad range of services and solutions impacting the fleet availability, such as fleet maintenance, upcoming modification projects and needed integrations in the later stages of the lifecycle as well as supply chain management and training services. Patria OPTIME is a modular service model that is always tailored to the customer needs and requirements, and it is set up in phases together with the customer.

Patria OPTIME combines top-notch engineering expertise with efficient data utilization in a unique way for the sustainment of military equipment. There is no comparable, comprehensive, manufacturer-independent and data-driven solution that can be deployed in all operating environments available from other market actors. It is a data-driven concept, which ensures the performance and cost-effective operation of the fleet. In the centre of the concept is data collection from the fleet usage and maintenance. Even during a crisis, the customer can count on Patria's support. Read more [here](#).

PROTECTED MOBILITY AND DEFENCE SYSTEMS

Patria TREMOS – Enhanced survivability

Patria launched a new armament innovation – Patria TREMOS. It is a mobile version of traditional mortar responding to the need of current and future warfighting requiring enhanced mobility, fire power and accuracy. With its integration module it can be integrated to various types of vehicles. It can utilize existing mortar tube, ammunition and ballistic tables.

Patria TREMOS provides robust and cost-effective solution to modernize high fire power smoothbore mortars with enhanced accuracy. The system can be equipped with INU and BMS connection to ensure high level of accuracy from the very first shot. Proven recoil technology allows to integrate the system on different suitable light and heavy vehicles such as 4x4, 6x6, 8x8 and light tracked vehicles. Due to efficient recoil system, there is no need for ground support, which enables vital rapid displacement of the system. Robust structure ensures reliability in all weather conditions. The latest news of CAVS programme – Patria to provide 56 additional armoured command and control vehicles for Latvia

Patria and Latvian Ministry of Defence have agreed on the manufacturing and delivery of 56 additional armoured Patria 6x6 vehicles, on top of the already ongoing deliveries as part of joint Common Armoured Vehicle System (CAVS) programme. These vehicles will serve as command and control (C2) units. Production of the vehicles will utilize local industry capabilities in Latvia, including Patria's armoured vehicle production facility in Valmiera, opened in May 2024. The deliveries will begin during this year and last until 2029. The value of the agreement is above 60 million Euros.

The procurement is part of the International CAVS programme, participated currently by Finland, Latvia, Sweden, and Germany. The research and development agreement for the programme was signed at the end of 2020 and deliveries to Latvia, Finland and Sweden have already started within the first three years of the programme. The programme is open to European countries with similar equipment requirements, with the approval of other participating countries.

Within the CAVS programme, the 6x6 armoured vehicle system development is led by Patria, that has more than four decades of experience in developing and delivering state-of-the-art protected troop transportation and system integration. Vast majority of supply of the vehicles is conducted by utilising the member nations' local industry capabilities and every new nation is inherently reinforcing the security of supply for the whole collaboration system. Patria has already received orders for over 750 Patria 6x6 vehicles.

BATTLEFIELD AND CRITICAL SYSTEMS

Patria's unmanned systems business grows

The field of unmanned system solutions is constantly being developed. One big step was the acquisition of Nordic Drones in October. Now Patria is the leading drone pilot trainer and manufacturer of drones designed for professional use in Finland. Patria Drones business designs and delivers complete solutions and user training for various technical aerial photography as well as mapping, measurement, inspection, control and authority tasks.
